

**AMENDMENTS TO THE SPECIFICATION**

**IN THE SPECIFICATION:**

Please amend the paragraph beginning on page 11, line 4, as follows:

B1  
Fig. 3 again is formed ~~formed~~ of Figs. 3A, 3B, 3C, 3D and 3E. And it shows how the method is presented to the system user. As soon as the user, for example of a word processor such as Microsoft Word, decides to have a file printed, he selects the option "File/Print" in the menu of this word processor as offered via the monitor screen 3. This is illustrated in Fig. 3A by the dark or highlighted bar in the selection menu 300. As soon as this option has been selected, the print dialogue window appears on the screen as shown in Fig. 3B. In Fig. 3B, elementary settings such as the required number of copies (in the "Copies" sub-window) and the pages for printing (in the "Page Range" sub-window) can be set in this window. If the user now selects "OK" the order transmitted to the default printing device is the file for printing with standard settings (e.g.: A4 format, portrait orientation, standard paper, simplex, no staple, black and white, 300 dpi resolution, 100% scale). In that case, however, the user does not know whether the job can be performed immediately, what settings cannot be accepted, and so on. By selecting the "Properties" button 302 in the "Printer" sub-window, the dialog window 304 appears as shown in Fig. 3C.
